

Design Build

BUILD

Energy efficiency from the ground up

Even with a clear energy improvement plan in place, delivering on your goals requires a diverse team of people to implement projects that will perform as promised. Our team of energy experts will be with you every step of the way—from aligning stakeholders with your vision during pre-construction and managing your project to validate performance, to project commissioning, quality checks and beyond, you'll realize results quicker than you could imagine.

We build the future of clean energy.

With your designs and people ready to go, it's time for your vision to come to life. No matter the depth of assistance required, our energy efficiency experts support construction across all phases, including following up with measurement and verification after the project is fully built.

① Pre-construction

Before we build, we'll make sure all project stakeholders are fully aligned and ready to begin. Our Design Build team will assess your facility's opportunities and needs, build out a custom project solution, create realistic estimates, coordinate competitive bidding, and contract for essential equipment and subcontractor services.

② Project and construction management

We provide you with full turnkey construction and project management, including ongoing progress meetings and reporting, subcontractor oversight, quality assurance, commissioning and performance measurements to close out documentation.

③ Savings persistence

To round out our build portfolio, we offer monitoring-based commissioning (MBCx) to track the occurrence of performance variances and address their associated causes to ensure persistent savings at every step of your efficiency journey.

Proven pay backs that protect our planet

68+ projects
up and running

\$50M+
in total project value

175+ MWh
saved annually

\$11M+
in annual energy savings

\$8M+
in total incentives processed

2-5 year pay backs
for most investments

Getting the job done, step by step

Assessments

Analyzing commercial energy systems to find new ways to improve efficiency.

Design

Providing custom-tailored designs for critical systems that save energy and money long-term.

Build

Getting to work on your energy-saving improvements with a vendor of your choice.

Management

Maintaining and improving your systems for commissioning and even more savings.

We change the way people use energy, *for businesses.*
